

IX. Mini Project-Movie Analytics

AIM:

To clean, process, and visualize global movie datasets (budget, revenue, ratings, genres and release seasons) using Python, and build both static (Matplotlib) and interactive (Plotly) visualizations, along with Power BI and Tableau dashboards, to derive insights on box-office trends.

DOMAIN:

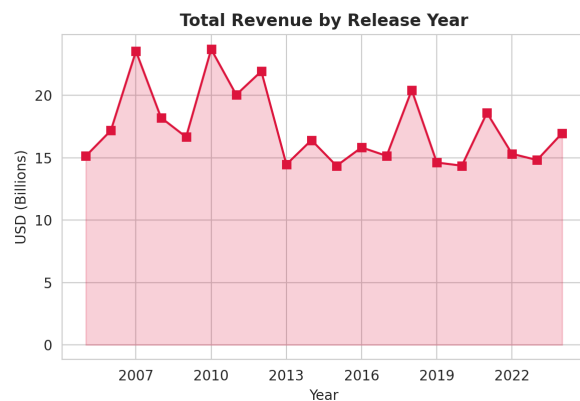

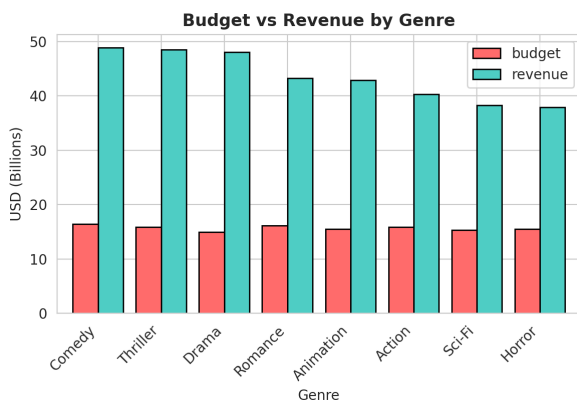

Movie Analytics (Entertainment)

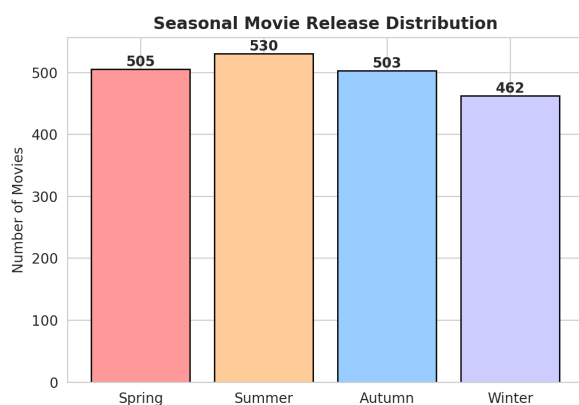

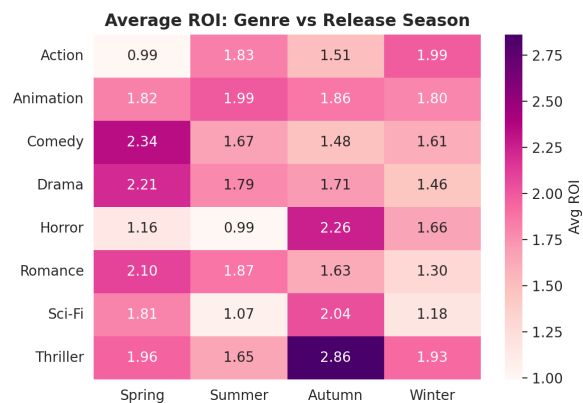

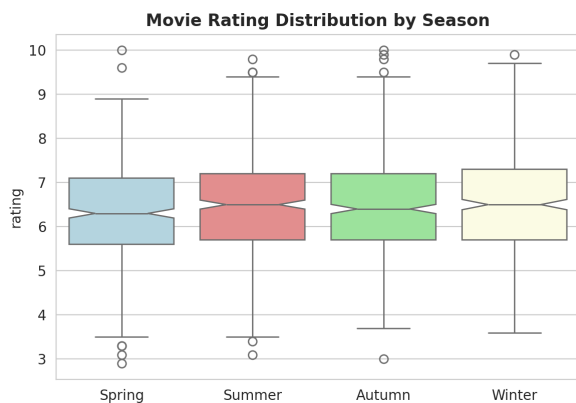

PROBLEM STATEMENT:

In the context of a rapidly growing global film industry, producers and analysts lack a unified visual dashboard that compares genres, release seasons, budgets, and audience ratings across countries. There is a need for a data-driven visualization system to compare markets and extract meaningful insights about profitable genres, best release windows, and top-performing regions.

OUTPUT:

Python:

PowerBI:

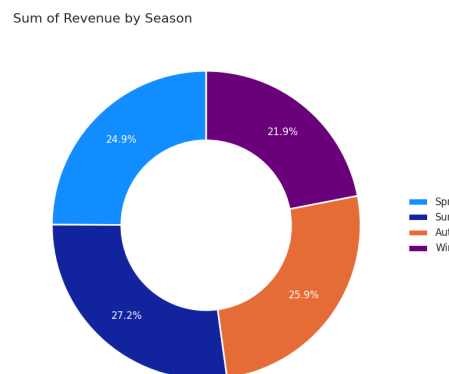

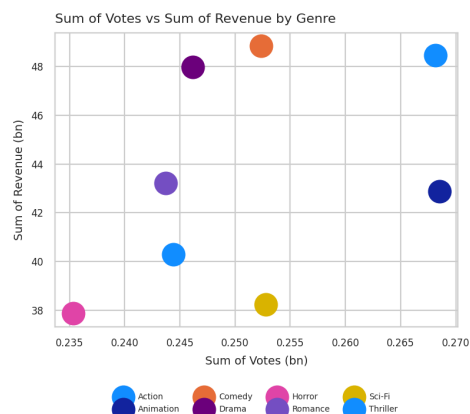

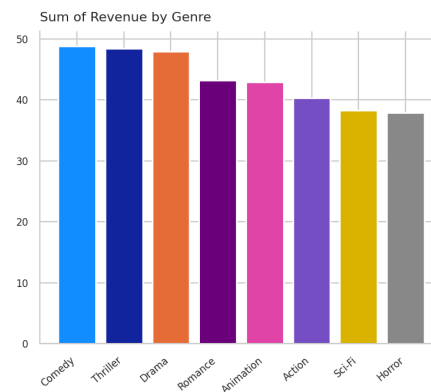

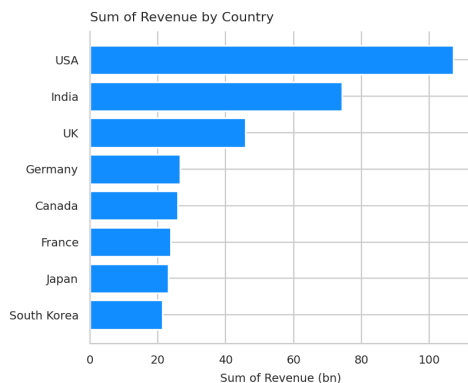

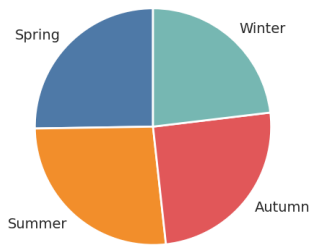

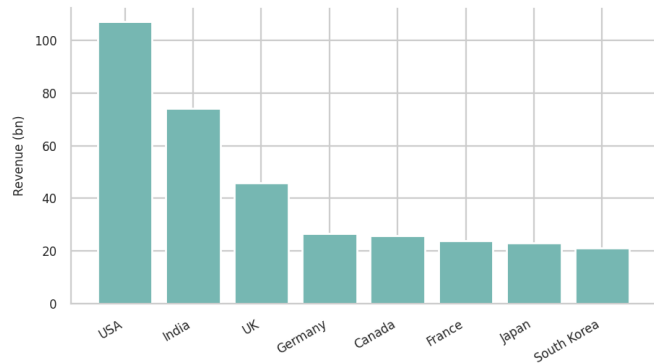

Tableau:

Smart Movie Analytics Dashboard

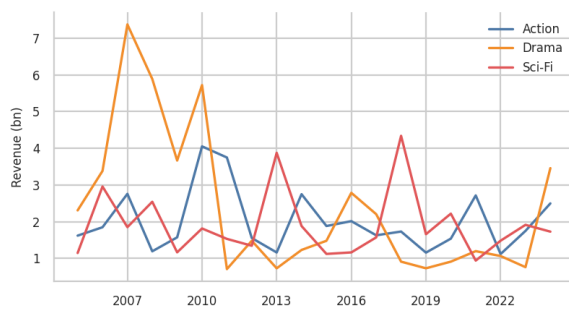

Pie Chart of Seasons

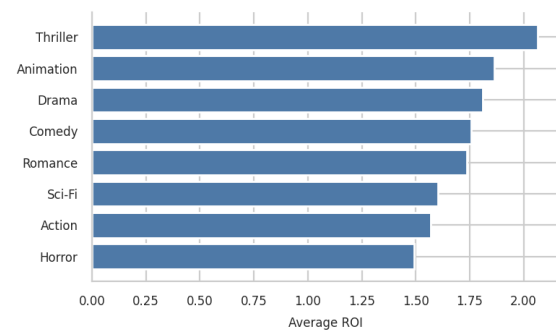

Revenue by Country

Line Chart - Revenue by Year

Average ROI per Genre

RESULT:

Thus, the given program was written and executed successfully.
